

# SOLAR ECLIPSE SAFETY

Regular sunglasses, no matter how dark, are not safe for eclipse viewing.

Solar eclipse glasses are thousands of times darker than sunglasses and comply with ISO 12312-2.

Closely supervise children while using solar eclipse glasses.

Do NOT use eclipse glasses with cameras, binoculars, or telescopes. These require special filters.

Always inspect your eclipse glasses before use; if torn, scratched, or damaged, discard them.

If driving do not allow yourself to be distracted. Find a safe place, well off the roadway, to view the solar eclipse.
